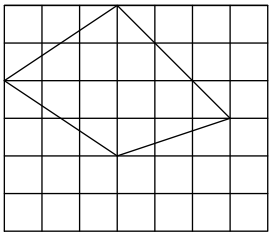
Geometry Worksheet 3A1

(1) _____ What is the ratio of the number of degrees in the complement of a 60-degree angle to the number of degrees in the supplement of a 60-degree angle? Express your answer as a common fraction.

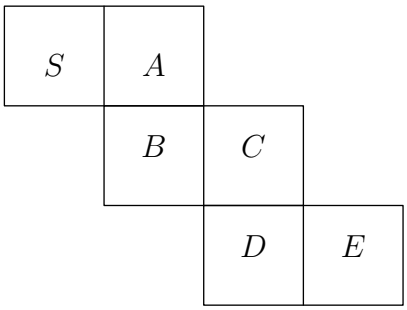
(2) _____ Brandon has an 8-inch square pan. Barbara has a 9-inch square pan. Both pans have the same volume. What is the ratio of the height of Barbara's pan to the height of Brandon's pan? Express your answer as a common fraction.

(3) _____ What is the area, in square centimeters, of the figure shown?



$\square = 1$ sq. cm.

(4) _____ When this net of six squares is folded to make a cube, which face will be opposite face S?



(5) _____ Two cubes have edge lengths of 6 inches and 12 inches. What is the ratio of the surface area of the smaller cube to the surface area of the larger cube? Express your answer as a common fraction.

(6) _____ The area of a circular plate is 200π cm^2. What is the number of centimeters in the radius of the plate? Express your answer in simplest radical form.

(7) _____ The perimeter of a rectangle is 48 units, and its length is twice its width. What is the number of square units in the area of the rectangle?

(8) _____ A circular spinner to be used in a game is divided by radii into 5 wedge-shaped pieces such that 4 pieces have equal area and the area of the remaining piece is twice the area of any one of the other pieces. How many degrees are in the central angle of the largest piece?

(9) _____ A figure skater is facing north when she begins to spin to her right. She spins 2250 degrees. Which direction (north, south, east or west) is she facing when she finishes her spin?

(10) _____ A cube has a surface area of 900cm^2. What is the number of cubic centimeters in the volume of the cube? Express your answer in simplest radical form.

(11) _____ In the diagram shown, $PS = \frac{1}{3}PR$, $PR = \frac{3}{4}PQ$, and $PQ = 40$ cm. What is the number of centimeters in the length of $\overline{SQ}$?

(12) _____ A telephone pole is supported by a steel cable which extends from the top of the pole to a point on the ground 3 meters from its base. When Leah walks 2.5 meters from the base of the pole toward the point where the cable is attached to the ground, her head just touches the cable. Leah is 1.5 meters tall. How many meters tall is the pole?

(13) _____ A 10 unit by 10 unit square is disassembled into unit squares. Two separate squares are then built using all of these unit squares. What is the edge length of the smaller of these two squares?

(14) _____ It takes 125 identical wooden cubes to fill a cubical box. How many of these cubes does it take to cover the bottom of the box?

(15) _____ A cube has a volume of 343 cubic cm. What is the number of square centimeters in the surface area of the cube?

(16) _____ What is the sum of the number of faces, edges and vertices of a cube?

(17) _____ How many different isosceles triangles have integer side lengths and perimeter of 81 units?

(18) _____ Congruent equilateral triangles are used to tessellate the plane. How many triangles share a common vertex?

(19) _____ A triangle is formed with sticks of length 8, 15 and 17 inches. Pieces of the same integer length are cut from each stick so that the three remaining pieces can no longer form a triangle. What is the least number of inches that could have been removed from each stick?

(20) _____ The rectangular stage at Radio City Music Hall in New York City measures 144 feet wide and 60 feet deep. What is the number of square yards in its area?

(21) _____ A water tank in the shape of a right circular cylinder has a base radius of 30 meters and a volume of 2700π cubic meters. What is the number of meters in the height of the tank?

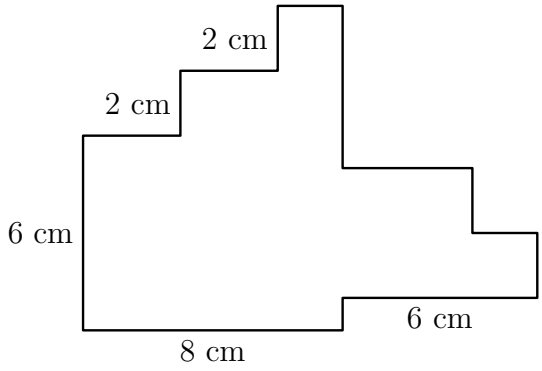
(22) _____ The surface area of a particular cube is 384 square centimeters. In cubic centimeters, what is the volume of the cube?

(23) _____ How many centimeters are in the length of the longest side of a rectangle whose area is 108 square centimeters and whose perimeter is 42 centimeters?

(24) _____ A rectangle's width is 3 units, its length is $(2x + 2)$ units and it has area 48 square units. What is the value of x?

(25) _____ One stamp is randomly selected from a 10-by-10 sheet of 100 stamps. What is the probability that the stamp selected is not along an outer edge? Express your answer as a common fraction.

(26) _____ If adjacent sides meet at right angles in the figure below, what is the number of centimeters in the perimeter of the figure?



(27) _____ The perimeter of a square lot is lined with trees, and there are three yards between the centers of adjacent trees. There are eight trees on a side, and a tree is at each corner. What is the number of yards in the perimeter of the lot?

(28) _____ Each side of hexagon $ABCDEF$ has a length of at least 5 cm and $AB = 7$ cm. How many centimeters are in the least possible perimeter of hexagon $ABCDEF$?

Answer Sheet

Number	Answer	Problem ID
1	1/4	0A4C
2	64/81	ADB41
3	12 cm	5213
4	C	44C1
5	1/4	2AA2
6	$10\sqrt{2}$ cm	B413
7	128	CD4C
8	120 degrees	B2A2
9	east	2322
10	$750\sqrt{6}$	4D4C
11	30 cm	1DA2
12	9 meters	2B4C
13	6	0513
14	25	0BA3
15	294 square centimeters	11D2

17	20	2513
18	6 triangles	42D2
19	6	D1B3
20	960 square yards	A4C1
21	3 meters	B3C1
22	512 cm^3	A24C
23	12 cm	DCA3
24	7	5322
25	16/25	A0D4
26	48 cm	CC54
27	84	42AC
28	32	3113

Solutions

(1) **1/4** **ID: [0A4C]**
No solution is available at this time.

(2) **64/81** **ID: [ADB41]**
No solution is available at this time.

(3) 12 **cm** **ID: [5213]**
No solution is available at this time.

(4) **C** **ID: [44C1]**
No solution is available at this time.

(5) **1/4** **ID: [2AA2]**
No solution is available at this time.

(6) $10\sqrt{2}$ **cm** **ID: [B413]**
No solution is available at this time.

(7) **128** **ID: [CD4C]**
No solution is available at this time.

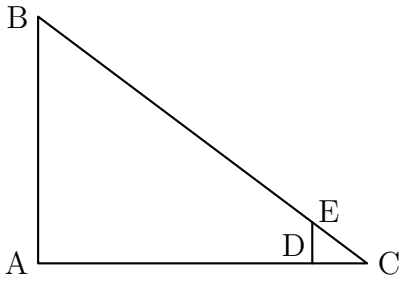
(8) **120 degrees** **ID: [B2A2]**
No solution is available at this time.

(9) **east** **ID: [2322]**
Each full circle is 360 degrees. Dividing 360 into 2250 gives a quotient of 6 with a remainder of 90. So, she spins 90 degrees to her right past north, which leaves her facing $\boxed{\text{east}}$.

(10) $750\sqrt{6}$ **ID: [4D4C]**
No solution is available at this time.

(11) **30 cm** **ID: [1DA2]**
No solution is available at this time.

(12) **9 meters** **ID: [2B4C]**
First, let us draw a diagram (not to scale!):



Here, AB is the telephone pole and C is the point in the ground where the cable BC is anchored. The key is to recognize that ABC is a right triangle since the telephone pole is upright. Meanwhile, Leah stands at D and touches the cable at E, so DEC is another right triangle. Not only that, but we see that $\triangle ABC \sim \triangle DEC$ thanks to AA similarity.

From the problem, We have that $DE = 1.5\text{m}$, $AC = 3\text{m}$, and $AD = 2.5\text{m}$. Therefore, $DC = AC - AD = 0.5\text{m}$. We desire AB. From $\triangle ABC \sim \triangle DEC$, we get:

$$\frac{AB}{AC} = \frac{DE}{DC}$$
$$\frac{AB}{3\text{m}} = \frac{1.5\text{m}}{0.5\text{m}} = 3$$
$$AB = 3 \cdot 3\text{m} = \boxed{9} \text{ meters.}$$

(13) 6 **ID: [0513]**
No solution is available at this time.

(14) **25** **ID: [0BA3]**
No solution is available at this time.

(15) **294 square centimeters ID: [11D2]**
No solution is available at this time.

(16) **26 ID: [CAA3]**
A cube has four sides, a top, and a bottom for 6 faces.
It has four vertices on the top and four on the bottom for a total of 8.
It has four edges on the top, four on the bottom, and four connecting them, for a total of 12.
So the sum is $6 + 8 + 12 = \boxed{26}$.

(17) 20 **ID: [2513]**
No solution is available at this time.

(18) **6 triangles ID: [42D2]**
No solution is available at this time.

(19) **6 ID: [D1B3]**
No solution is available at this time.

(20) **960 square yards ID: [A4C1]**
No solution is available at this time.

(21) **3 meters ID: [B3C1]**
Let the height measure h meters. By the formula for area of a cylinder, which states that $V = \pi r^2 h$ where V, r, h denote volume, radius and height respectively, we have

$$2700\pi = \pi(30)^2 h.$$

Solving yields $h = \boxed{3}$ meters.

(22) **512 cm^3 ID: [A24C]**
The surface area of a cube with edge length e is $6e^2$. Solving $6e^2 = 384$ gives $e = \sqrt{384/6} = 8$ centimeters. The volume of a cube with edge length 8 cm is $(8 \text{ cm})^3 = \boxed{512}$ cubic centimeters.

(23) **12 cm ID: [DCA3]**
No solution is available at this time.

(24) **7 ID: [5322]**
No solution is available at this time.

(25) **16/25 ID: [A0D4]**
No solution is available at this time.

(26) **48 cm ID: [CC54]**
